**4MANGUSFARM.COM**

I would like to welcome you to our 12th annual bull sale, and thank you for taking time to look at our offering! I have to start out by thanking all of my family. My wife, Kami, and our 2 daughters Kyra and Kasey, all play a huge part in our operation and we could not get done what we do without the tremendous amount of work they all put into it. We also have to thank our parents for all the work and time they spend helping out. Whether it be feeding cattle or helping out on the farm or running kids here and there, all of their help is greatly appreciated! Finally, we have to thank Shane and Keith for all their hard work. Their dedication and help with the cattle and farming operation is a tremendous asset to us.

The bull's being offered this year are a tremendous set of stout, high performing, easy doing bulls. Our bulls are fed right and built for longevity. Feet and legs are extremely important to us and our bulls are fed a high roughage diet with the idea of lasting longer and being problem free for a longer period. A larger number of the bulls selling will have 50k data collected on them and will be posted in the catalog. We hope this gives our customer more confidence, and aids in the selection of their bull. We take great pride in

the bulls we offer you and only offer the top 1/3 of our bull crop born. This ensures our customers are getting the best bulls for their money and not just a "average" bull! Our bulls this year are as even from top to bottom as any set we have ever offered. There are bulls that range from being calving ease oriented to more high performance bulls. I always tell Kami, if I wouldn't want to use them, we're not going to try and sell them to someone else!

This year we will also be offering a group of select females to share with you. We are truly offering the best of what we have as far as our replacement females go! One of the best offerings we have ever had and you can find anywhere is lot 80, 4M Blackbird 2004. Read her footnotes and you will see why this is one of the greatest, proven females to sell anywhere in the U.S. this year I feel.

I want to again thank Hans and his family for once again being a part of our sale and bringing us a tremendous set of bulls. The Burken families are as good of people as you will find anywhere and we thank them again for bringing us a tremendous set of Sim influenced bulls.

Our sale will begin at 2:00 on Sunday, March 10th and we will serve a complimentary lunch beginning at 12:00. If you should have any questions on any of the bulls, please feel free to contact Hans or I. Our place is always open for visitors and we hope to see you the 10th.

*Sincerely, Brandon Meyer*

## BURKEN CATTLE CO

**BURKEN CATTLE CO | 1987 Road 1800 | Blue Hill, NE 68930**  
Hans Burken 402-469-1966 | hansburken@gmail.com

**BURKENCATTLE.COM**

Welcome to the 2019 4M Angus/Burken Cattle Bull Sale. A big thank you to Brandon and Kami for all they do for us during the year and allowing us to take part in this sale. Their help and advice are greatly appreciated. They have done a wonderful job of raising Angus cattle and two hard working, caring daughters.

The fall and winter have been a challenge for man and creature alike, but the moisture is greatly appreciated and should make for a wonderful spring and summer. With the weather considered, the bulls have been hitting on all cylinders. This year's set of bulls have all the pieces backed by proven genetics and performance data. They have been developed on the same program as in the years past which has been shown to promote longevity while expressing muscle shape and structural soundness. We believe these bulls will produce calves that will perform and hit many different market scenarios.

The bulls were again developed at Darr Feedlot under the care of Mitch Ziebell, Scott Nielsen, and the crew. Thanks for all their help and continued friendship. I also need to thank all of my family whom help throughout the year. We are fortunate enough that we can all work together and have fun doing it.

We stand behind these bulls 100%. If at any time you have an issue with any of the bulls, please feel free to contact us. Thank you for your consideration in our program, and we would like to answer any questions you might have with this year's offering.

Updated EPDs of all the bulls will be available on DVAuction prior to the sale. Unfortunately, with the ultrasound/yearling weights being completed so close to catalog time, there was not enough time to get the updated EPDs into the catalog, these will be available February 23. Homozygous Black data on all bulls will also be available prior to the sale. Thanks again.

*Sincerely, Hans Burken & Erik Burken*

# BURKEN CATTLE CO

## 12th Annual Bull & Female Sale

SUNDAY, MARCH 10, 2019 - 2:00 PM CST

4M ANGUS SALE FACILITY - BLUE HILL, NEBRASKA

### SALE LOCATION

**4M ANGUS SALE BARN** | 1459 RD AA | Blue Hill, NE 68930  
Located 1 mile north and 1.5 miles west of Blue Hill, NE

### AUCTIONEER

Matt Lowery.....308-750-6119

### SALE DAY PHONES

Brandon Meyer.....402-469-0439  
Kami Meyer.....402-469-8895  
Hans Burken.....402-469-1966  
Erik Burken.....402-621-0774  
Kurt Burken.....402-469-6064

### REPRESENTATIVES

**Drew Feller**, American Angus Association.....402-841-4215  
**Randy Rasby**, Livestock Plus .....308-539-6195  
**Dallas Woltemath**, Marketing Consultant.....308-390-6400

### CATALOG DESIGN

Hannah Shroyer, Design Unbridled.....402-841-4216

### LUNCH

A complimentary lunch will be served starting at 12:00 noon Sunday, March 10, 2019.

### FREE CARE

All bulls will be cared for and wintered free of charge until March 30. Any bull picked up within 3 days of the sale will have \$50 deducted from the purchase price.

### LIABILITY

All precautions will be taken to protect the safety of everyone attending the sale. However all persons attending the sale do so at their own risk. Neither 4M Angus nor any of the sale staff assume any responsibility or liability, legal, or otherwise for any accidents occurring on or about the premises.

### GUARANTEE

All bulls selling for \$2,500 or more are guaranteed against breeding injury for the first season. Breeding season is defined as the 90-day period following the turnout of the bulls. If a replacement bull is available, one will be provided or if the buyer prefers, credit towards one bull will be given in the following year's sale, less salvage value of the injured bull. This guarantee is not a life insurance policy. It does not include loss due to abuse, neglect, sickness, or an act of God (lightning, flood, etc.). If any problems or issues arrive, please contact us within 48 hours.

### TERMS & CONDITIONS

All cattle sell under a 100% satisfaction guarantee from 4M Angus and under the terms and conditions of the American Angus Association.

### HERD HEALTH

The bulls are on a complete health program. They have had pre-weaning and weaning shots and have been vaccinated with IBR, BVD Type I and II, P13, Pasturella, 7-way, Haemophilus, and Decotmax injectable. All bulls have been scrotal measured and have passed a semen test done by Dr. Jeremy VanBoening of Republican Valley Animal Center at Alma, NE.

### FREE DELIVERY

Free delivery will be done on all bulls up to 150 miles. After the 150 miles you may be asked to meet at a central location or arrange for delivery of your bull.

### ONLINE BIDDING

The sale will be broadcast live on DVAuction.com and videos will be available on their website as well. Please register a few days in advance of the sale. Call the office at 402-316-5460 with questions.

THE BUSINESS BREED

**Expected Progeny Difference (EPD)**, is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

**\$Value Indexes**, are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Cow Energy Value (\$EN)**, expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

**Carcass Weight EPD (CW)**, expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling EPD (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Fat Thickness EPD (Fat)**, expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

**Weaned Calf Value (\$W)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for preweaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.

**Feedlot Value (\$F)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

**Grid Value (\$G)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

**Beef Value (\$B)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

## DRIVING THE SCIENCE OF BETTER BREEDING

There's little room for error in the cattle business. Producers need the most advanced information to make smart selection decisions, and Angus Genetics Inc. (AGI) provides it through genomic-enhanced expected progeny differences (GE-EPDs). EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide:

Increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs

Better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency)

The ability to make more rapid progress for traits that are important to you, due to:

- more accurate selection
- easier identification of genetic outliers
- the ability to propagate young animals with confidence earlier in their lives

In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8-33 calves, depending on the trait. That's valuable insight, offered regularly through the breed's weekly national cattle evaluation at [www.angus.org](http://www.angus.org).

### How do you know if EPDs are genomic-enhanced?

Ask your breeder, refer to the registration paper, or look for the AGI GE-EPD logo, Angus GS™ powered by partner Neogen GeneSeek or the HD50k or i50k by partner Zoetis.

**Expected Progeny Difference (EPD)**, EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed

in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit [www.simmental.org](http://www.simmental.org). Listed below are the units ASA EPDs are expressed in:

**Calving Ease (CE)**: Percent of unassisted births when used on heifers.  
**Birth Weight (BW)**: Pounds of birth weight.  
**Weaning Weight (WW)**: Pounds of weaning weight.  
**Yearling Weight (YW)**: Pounds of yearling weight.  
**Maternal Calving Ease (MCE)**: Percent of unassisted births in first-calving daughters.  
**Milk (MLK)**: Pounds of weaning weight due to milk.  
**Maternal Weaning Weight (MWW)**: Pounds of weaning weight due to milk and growth.

**Yield Grade (YG)**: Yield grade score.  
**Carcass Weight (CW)**: Pounds of carcass weight.  
**Marbling (MRB)**: Marbling score. Back Fat (BF): Inches of backfat.  
**Ribeye Area (REA)**: Square inches of ribeye.  
**All-Purpose Index (API)**: Dollars per cow exposed under an all-purpose-sire scenario. (See below for more details.)  
**Terminal Index (TI)**: Dollars per cow exposed under a terminal-sire scenario (See below for more details.)

**\$Indexes**: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

- **All-Purpose Index (API)**: Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.
- **Terminal Index (TI)**: Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

**Using API and TI**: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years ( $\$50 \text{ diff.} \times 30 \text{ hd.} \times 4 \text{ yr.} = \$6,000$ ). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit [www.simmental.org](http://www.simmental.org).

The only Renown son in the sale but still an extremely high-quality individual! Keep every female out of this bull as our Renown daughters are some of the best young cows in our herd and have beautiful udders with more than adequate milk.

We end the bull portion with the final son or daughter to ever sell out of our great 1088 cow. We lost this female who has produce in excess of \$70,000 for us in previous sales and couldn't think of a better way to end our bull offering than with this smoothly made son of her.

**Offering 1/2 embryo interest and no possession with the option to double up and own 100% of the greatest cow we have ever owned!**  
Her list of sale features and highlights could go on for pages!

She is one of the most massive, and powerful daughter of not only Upward, but her dam, 4301 to be found! Her son, 4M Element 405, was our lead off bull and high seller in our 2015 sale going to Peak Dot Ranches, and leased to Semex, for \$35,000. He has produced some of the top selling bulls in their sale every year. A daughter of 2004, 4M Blackbird 4058, was the top selling female in our 2017 sale selling to Poss Angus. She just produced the top selling bull in the 2019 Poss Sale selling for \$27,000 to ST Genetics. In our 2018 sale she produced the top selling female, 4M Blackbird 7009, selling to Steve Zybach. Her 3/4 sister Sandpoint Blackbird 8809 needs no introduction and has put more bulls in studs across America than any other female in recent years including her recent son, VAR Power Play, who brought \$730,000 for 1/2 interest.

No other daughter of Upward or 4301 can match her low birth weight, high growth, high scrotal combination when you sort for accuracy. She is in the top 1% of the breed for WW, YW, \$W, and \$F and top 3% for \$B. Has averaged 10.4 embryos per flush and sells open ready to flush. She has 3@91 for BW, 3@113 for WW, and 2@108 for YW to go along with 7@102 for both IMF and RE.

**One of the biggest and best opportunities we have ever offered!**

**SON OF 2004 - 4M ELEMENT 405**

**DAUGHTER OF 2004 - 4M BLACKBIRD 4058**

**GRANDSON OF 2004 - POSS PAYWEIGHT 8514**

**FULL SISTER OF 2004 - GALAXY BLACKBIRD 2102**

**\$730K FOR HALF INTEREST - V A R POWER PLAY 7018**  
*Son of Sandpoint Blackbird 8809, a 3/4 sister to 4M Blackbird 2004.*

**3/4 SISTER OF 2004 - SANDPOINT BLACKBIRD 8809**

This pair of flush sisters come from one of the most proven and productive females in our herd. Their pathfinder dam has a WW ratio of 5@105 and a YW ratio of 4@110. These Cowboy Up daughters should be beautifully uddered brood cows and are the first females we have ever offered for sale out of this foundation pathfinder female! Flush mate to lot 82 and lots 2,3, and 4 in the bull offering.
