4MANGUSFARM.COM

I would like to personally invite you to our 14th Annual Bull Sale and thank you for taking time to look at our offering! I have to start out by thanking my family. My wife, Kami, and our two daughters Kyra and Kasey, all play a huge part in our operation and we could not get done what we do without the tremendous amount of work they all put into it. We also have to thank our parents for all the work and time they spend helping out. Whether it be feeding cattle or helping out on the farm or running kids here and there, all their help is greatly appreciated! Having Kyra off to college now, we've lost part of our labor but I can't thank Kami enough for the hours she puts in! Finally, we have to thank Keith and Blake for all their help throughout the year. They are a huge help with anything we ask of them and we appreciate all that they do for us!

The bull's being offered this year are a tremendous set of stout, high performing, easy doing bulls. Our bulls are fed right and built for longevity. Feet and legs are extremely important to us and our bulls are fed a high roughage diet with the idea of lasting longer and being problem free for a longer period. All of the bulls selling will have 50k data collected on them and will be posted in the catalog. We hope this gives you more confidence and aids in the selection of your bull. We take great pride in the bulls we offer you and only offer the top 1/3 of our bull crop born. This ensures our customers are getting the best bulls for their money and not just an "average" bull! Our bulls this year are as even from top to bottom as any set we have ever offered. I truly feel this is the deepest set of bulls ever offered for sale here! There are bulls that range from being calving ease oriented to more high-performance bulls. I always tell Kami, if I wouldn't want to use them, we're not going to try and sell them to someone else!

I would like to invite anyone and everyone to stop by and see the dams of all the bulls selling and also the many full sisters to our E.T. bulls. These cows are the backbone of our herd and we would be excited to show any of our past or future customers. They are the reason we are so confident in what our bulls can do to improve herds of our customers across the country! Show me a truly good bull and I can guarantee there's a pretty good cow behind that bull.

I want to again thank Hans and his family for once again being a part of our sale and bringing us a tremendous set of bulls. The Burken families are as good of people as you will find anywhere and we thank them again for bringing us a tremendous set of Sim influenced bulls.

Our sale will begin at 2:00 on Sunday, March 14th and we will serve a complimentary lunch beginning at 12:00. If you should have any questions on any of the bulls, please feel free to contact Hans or I. Our place is always open for visitors and we hope to see you the 14th.

Brandon Meyer

welcome

Hans Burken 402-469-1966 | hansburken@gmail.com

BURKENCATTLE.COM

Welcome back again to the 4M Angus/Burken Cattle Company annual bull sale. On behalf of our family we once again thank Brandon and Kami for their support and letting us showcase our bulls alongside the powerful Angus bulls they produce.

The year 2020 was a struggle but it showed us that BEEF is no longer a luxury meat. The record prices being paid for beef in retail has showed us that US beef is the leader in consumer satisfaction. Couple this with a contracting US cowherd over the last 2 years, the future looks promising for cattle producers.

We are still committed to producing cattle with calving ease, high growth, moderate frame, and carcass genetics with low inputs. The sale bulls this year average in the top 50% of the Simmental database for Calving Ease and Birthweight, while ranking in the top 25% for Weaning and Yearling Weight. The influence of the 515 cow again is heavy in the offering with her twin sons sired by Breakout and embryo sons sired by CDI Mainline. This cow checks all the boxes in what we are striving to produce, she will have a large set of sons and grandsons selling in coming sales. The large sire groups of Mainline and KBHR Wentz are performance machines that should work well for any of our customers and there is also a solid set of red bulls.

Like always we must send out a huge thank you to all of you out there that help us throughout the year. If it be friendship, advise, or man power we appreciate you all. Also a big thanks to the Darr Feedlot crew, Mitch Ziebell, Scott Neilsen, and others that have taken great care of the bulls as always.

Thank you for your interest and please feel free to call either of us with any questions or problems about the offering.

Hans Burken & Erik Burken

Annual Bull Sale

SUNDAY – 2:00 PM

MARCH 14, 2021

4M ANGUS FARM / BLUE HILL, NEBRASKA

SALE LOCATION

4M ANGUS SALE BARN | 1459 RD AA | Blue Hill, NE 68930

 Carlee Meeks, Purple Visions Productions..... 308-750-5216

GUARANTEE

Buyers of all bulls selling for \$3000 or more are guaranteed against breeding injury for the first season. Breeding season is defined as the 90-day period following the turnout of the bulls. If a replacement bull is available, one will be provided or if the buyer prefers, credit towards one bull will be given in the following year's sale, less salvage value of the injured bull or \$1250, whichever is higher. This is not a life insurance policy. It does not include loss due to neglect, sickness, or an act of God (lightning, flood, etc). If any problems or issues arise, please contact us within 48 hours.

TERMS & CONDITIONS

All cattle sell under a 100% satisfaction guarantee from 4M Angus and under the terms and conditions of the American Angus Association.

HERD HEALTH

The bulls are on a complete health program. They have had pre-weaning and weaning shots and have been vaccinated with IBR, BVD Type I and II, P13, Pasturella, 7-way, Haemophilus, and Decotmax injectable. All bulls have been scrotal measured and have passed a semen test done by Dr. Jeremy VanBoening of Republican Valley Animal Center at Alma, NE.

FREE DELIVERY

Free delivery will be done on all bulls up to 150 miles. After the 150 miles you may be asked to meet at a central location or arrange for delivery of your bull.

ONLINE BIDDING

The sale will be broadcast live on DVAuction.com and videos will be available on their website as well. Please register a few days in advance of the sale. Call the office at 402-316-5460 with questions.

American Angus Association Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Residual Average Daily Gain (RADG), feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for postweaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Yearling Height (YH), is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to the that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (DOC), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility in a sire's offspring compared to another sire.

MATERNAL

Heifer Pregnancy (HP), is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), is a predictor of a sire's genetic merit for milk and mothering ability in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Mature Weight (MW), expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

Mature Height (MH), expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

FOOT SCORE

Claw Set (Claw), is expressed in units of claw-set score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal claw set, which is toes that are symmetrical, even and appropriately spaced.

Foot Angle (Angle), is expressed in units of foot-angle score. A lower EPD is more favorable, indicating a sire will produce progeny with more ideal foot angle, which is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

CARCASS

The genetic evaluation produces a single set of EPDs for carcass traits where the units of measure are in trait format and analyzed on an age-constant basis.

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$VALUE INDEXES

\$Value Indexes, reported in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. Increased selection pressure on \$W increases weaning and maternal milk traits while increasing mature cow size.

Cow Energy Value (\$EN), expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals. Components for computing \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase, and market these animals on a quality-based carcass grid.

We start off our sale offering with our bulls from our all-time top selling bull, 4M Ace 709. This bull phenotypically is one of the best ever produced by his sire and combines that with extra shape across his top and down through his rear quarter. Out of one of our favorite cows on the farm who has produced numerous top selling bulls for Foxhoven Angus. Ratioed 116 for RE with an actual ribeye of 17 inches.

4M Ace 709 is the all-time top selling bull at 4M Angus going to ABS in our 2018 sale for \$53,000. Our Ace calves have been low birth weight calves with tremendous growth and power. He has been used for the last two years on heifers and have produced the heaviest calves coming off our two-year-olds. The daughters calving now may well be the best part of Ace. They are beautifully uddered with a good amount of milk and extremely gentle.

Super high performing Ace son that is in the top 1% for WW, YW, CW and \$W. Check out the spread from birth to yearling of 2.5 to 163! His daughters should be highly maternal, highly fertile females with tremendous udder quality. This bull's dam, 2004, has sold more dollars worth of bulls than any female in our herd, including the Element son who sold to Peak Dot Ranches for \$35,000 in our 2015 sale. Very, very good Ace son here!

Without question, one of the most massive bulls ever produced at 4M. With a spread of 2.1 to 169, this bull is one of the best in the sale for adding performance. This guy also is the heaviest weaning weight and yearling weight bull ever produced here. He came in at a whopping 918 lbs at weaning time to ratio 115 and kept on going to 1552 at a year for a ratio of 110. On top of his impressive growth EPDs, this bull ratioed 152 for IMF and 105 for RE!! If anyone is looking to add pounds to their calf crop, this bull should be at the top of your list.

**ONE OF THE MOST MASSIVE BULLS
EVER PRODUCED AT 4M.**

Top selling bull in Boyd's 2019 sale. Chosen for his tremendous growth and super high fertility. Extremely docile bull and offspring. Females will be some of our most impressive down the road.

SALE FAVORITES

Many of visitors have picked out this bull as a favorite and for good reason! He is a big topped, huge quartered bull that is even more impressive in person. He is so complete from front to back and when you can put that much power in such a correct and attractive package you have a really, really good one. Scanned an actual ribeye of 17.3 to ratio 117 and had a weaning ratio of 109. His Capitalist dam is the front pasture kind and is as good as anything we own so keep every daughter from this bull! So many things to like and he is one of the best in the sale.

If you want extreme growth and sell your calves by the pound, these Proactive sons are the real deal. This bull is so long and so huge topped, sometimes he can get a little lazy in his top. Don't overlook him; he is one of the best in the sale and any one wanting females or to add pounds to a calf crop needs to take a serious look here. Ratioed 105 for weaning and 110 at a year from a Renown female who has 2@107 for nursing and 2@108 for yearling. Her first calf produced was a sale feature and one of the top selling bulls last year going to Gerald Krueger.

This 84 lb birthweight Proactive son may well be one of the best bulls in the entire offering. Any one that turns bulls out a little later in the year needs to pay attention to this outstanding young bull! If you study the EPDs and compare this April born calf to others nearly 3 months older, you will see why we are so high on this bull. We have never offered a bull this young in any prior sale but we think this bull has all the makings of a really, really good one. With 7 genomic categories in the top 2%, this guy needs a serious look! Ultrasound information will be available sale day.

Entice is wide-based, long-bodied with exceptional depth of rib and thickness. He offers a very pleasing phenotype in a growth oriented mid six frame score. He does very well from a carcass standpoint. He has a 4.94 IMF score with a ratio of 118 and a ribeye measurement of 17.0" with a ratio of 114. He has a good disposition, which is validated by his score of 1 on the 50K test for Docility.

This trio of flush brothers from our great 2004 cow could very well be the greatest set of bulls ever produced by her! These gentle giants are big topped, thick ended bulls with a set of EPDs that will rival any in the sale. Whether you sell your calves at weaning or sell them on the grid, any of these 3 brothers are sure to add dollars to your bottom line. Look at the genomic scores and EPD's of all 3 of these and you can see why we are so excited for the potential in them. Every day we go back and forth between which is our favorite but are sure you can't go wrong whichever one you like. This bull ratioed 103 at weaning, 111 at a year and scanned a 5.36 IMF to ratio 143!! Flush brother to lots 20 and 21. One of the best flushes ever produced at 4M Angus!

Another Entice son from one of the best young cows in our herd. These Entice calves have excellent growth and for anyone wanting to add more carcass premiums to their operation, they are an excellent candidate to do just that. His dam raised the high selling bull in our 2019 sale selling to Foxhoven Angus.

Record setting bull from the Tehama program and highlight of the fall 2018 sales season. Admired for his sound structure, foot quality and massive appearance. Power phenotype bull with top 5% growth that also happens to have a +15 Calving Ease EPD. Maternal pedigree backed by a program that has relentlessly pursued and been focused on maternal output coupled with end product merit.

These Patriarch bulls are some of the leading candidates in the sale for sure-fire heifer bulls! We used Patriarch to add some outcross genetics in a low birthweight package but also to improve the carcass and performance of most heifer bulls sold. This bull goes from a 0.2 to 137 and ratioed 113 at weaning and 106 at a year. My favorite of the heifer bulls.

Growth Fund has an impeccable EPD profile that provides modest Calving Ease with off the charts growth and end product values. He ranks among the Angus breed's most elite 1% for WW, YW, CW, \$W, \$F and \$B. He is a structurally sound, moderate-framed bull with a powerful hip and rear leg. He exhibits extra neck extension, a smooth shoulder and is wide topped and wide-based with muscle expression and depth of body.

FLUSH BROTHERS
LOTS 31-34

We lead off this set of 4 full brothers with a big topped, stout, bull that is as complete as any in the offering. These bulls come from the great Blackbird cow family and a female that was the top selling female from Carlson Cattle Company in a past sale. This Growth Fund bull is as stout and thick as any we will sell today. Combine that with a genomic profile that is at the top of his flushmates and he is one of the top ones in the sale. Take a look at these 4 full brothers and their 3 maternal brothers by Raindance and you can see the consistency and uniformity this cow produces. Ratioed 110 for RE. Flushmate to lots 32, 33 and 34.

The natural born calf from our F703 donor and the dam of Lot 1 in this year's sale. Another calf that needs to be evaluated for his age. This bull is huge topped and big ribbed and has more natural width and dimension than most fall born bulls. If you calve a little later this is another bull that needs a good look as his dam never misses and always raises a good one and this one is really really good regardless of his age. Ultrasound information available sale day.

A high growth bull from our newest herd sire addition that ratioed 112 @ weaning and 107 @ a year. Another bull that is a little younger than his contemporaries but shouldn't be overlooked!

A GREAT YEAR IN THE SHOW RING!

BURKEN CATTLE CO

SimAngus Bulls

American Simmental Association

Expected Progeny Difference (EPD), EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org. Listed below are the units ASA EPDs are expressed in:

Calving Ease (CE): Percent of unassisted births when used on heifers.

Birth Weight (BW): Pounds of birth weight.

Weaning Weight (WW): Pounds of weaning weight.

Yearling Weight (YW): Pounds of yearling weight.

Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.

Milk (MLK): Pounds of weaning weight due to milk.

Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.

Yield Grade (YG): Yield grade score.

Carcass Weight (CW): Pounds of carcass weight.

Marbling (MRB): Marbling score. Back Fat (BF): Inches of backfat.

Ribeye Area (REA): Square inches of ribeye.

All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario. (See below for more details.)

Terminal Index (TI): Dollars per cow exposed under a terminal-sire scenario (See below for more details.)

\$Indexes: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

- **All-Purpose Index (API)**: Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.
- **Terminal Index (TI)**: Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years (\$50 diff. x 30 hd. x 4 yr. = \$6,000). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org.

5/8 SM 3/8 AN. Homozygous Black-Elite herdbull potential here in this natural calf of the 515 donor cow. Larger framed, long sided, very gentle bull with impressive figures. Highest marbling score among the group at 5.14, along with the highest adjusted yearling weight at 1379. He boasts EPD percentiles in the top 20% WW, 15% YW and MARB, 10% API and TI. His maternal numbers shine as well with top 5% Milk and 2% Stay. Maternal siblings sell as lot 51, 54, 55, 56.

Entice is wide-based, long-bodied with exceptional depth of rib and thickness. He offers a very pleasing phenotype in a growth oriented mid six frame score. He does very well from a carcass standpoint. He has a 4.94 IMF score with a ratio of 118 and a ribeye measurement of 17.0" with a ratio of 114. He has a good disposition, which is validated by his score of 1 on the 50K test for Docility.

Wentz is a stout, powerfully constructed bull that is pure mass and easy fleshing from end to end. He is a true growth and performance bull that will add muscle shape and pounds to his progeny. Wentz is passing his outstanding eye appeal and functional phenotype on to his progeny. Look for his sons to make a splash in sales around the country in 2020.
