*Welcome to our
15th Annual
Bull Sale!*

4 M A N G U S

I would like to personally invite you to our 15th annual bull sale and thank you for taking time to look at our offering! I must start out by thanking all my family. My wife, Kami, and our 2 daughters Kyra and Kasey, all play a huge part in our operation, and we could not get done what we do without the tremendous amount of work they all put into it. We also must thank our parents for all the work and time they spend helping. Whether it be feeding cattle, helping out on the farm, or running kids here and there, all their help is greatly appreciated! Having Kyra off to college now, we have lost part of our labor, but I cannot thank Kami enough for the hours she puts in! Finally, we must thank Keith, Blake, Haden and our newest full-time man, Jeff, for all their help throughout the year. They are a huge help with anything we ask of them, and we appreciate all that they do for us!

4M ANGUS | 1459 RD AA | Blue Hill, NE 68930
 Brandon Meyer 402-469-0439 | bkmeyer@gtmc.net

4MANGUSFARM.COM

The bulls being offered this year are a tremendous set of stout, high performing, easy doing bulls. Our bulls are fed right and built for longevity. Our bulls are not creep fed, so their weights are true and show their genetic potential. Feet and legs are extremely important to us and our bulls are fed a high roughage diet with the idea of lasting longer and being problem free for a longer period. All the bulls selling will have 50k data collected on them and will be posted in the catalog. We hope this gives our customer more confidence and aids in the selection of their bull. We do not chase numbers or the latest fad in choosing our sires. We look for highly maternal sires that will put females back in the herd with longevity for our customers and feeder calves that earn them a premium at sale time. We take immense pride in the bulls we offer you and only offer the top 1/4 of our bull crop born. This ensures our customers are getting the best bulls for their money and not just an "average" bull! Our bulls this year are as even from top to bottom as any set we have ever offered. I truly feel this is the deepest set of bulls ever offered for sale here! There are bulls that range from being calving ease oriented to more high-performance bulls. I always tell Kami, if I would not want to use them, we are not going to try and sell them to someone else!

I would like to invite anyone and everyone to stop by and see the dams of all the bulls selling and the many full sisters to our E.T. bulls. These cows are the backbone of our herd and we would be excited to show any of our past or future customers. They are the reason we are so confident in what our bulls can do to improve herds of our customers across the country! Show me a genuinely good bull and I can guarantee there is a rather good cow behind him.

I want to again thank Hans and his family for being a part of our sale and bringing us a tremendous set of Simmental influenced bulls. The Burken families are as good of people as you will find anywhere.

Our sale will begin at 2:00 on Sunday, March 13th and we will serve a complimentary lunch beginning at 12:00. If you should have any questions, please feel free to contact Hans or I. Our place is always open for visitors and we hope to see you the 13th.

Brandon Meyer

BURKENCATTLE.COM

We would like to welcome you all to the 15th 4M/Burken Cattle Co Annual Bull Sale. The future of the cattle market is looking great. It is important that we continue to produce cattle that work for us and perform to meet our customers needs to receive the highest return on our investments.

This is the stoutest and most uniform set of bulls we have offered yet. The bulls are cataloged starting with 2 sons by our 515 donor and then by sire group so please look over entire offering. Lots 42 and 45 are bulls we feel that can run with the elite, but all the bulls will produce progeny that will perform for their new owners. You will notice all the bulls in the offering have double digit calving ease with above average growth. We strive to produce cattle that are born easy, mothered, and grow with minimum inputs. With full time jobs off the farm, our cows get our attention on nights and weekends, so calving ease and vigor are essential. We do not creep feed and will not put up with any problem cattle. The steer mates to our bulls are fed to finish and have done exceptionally well on the grid over the years.

We would again like to say thank you to Brandon and Kami for their continued support and cooperation over the years. Their genetics have worked on our cows and we know they will work for you. Also we need to give a big thanks to our families. We are fortunate they have the same work ethic and love for the outdoors and cattle that we do to make the operation run day to day. Thanks to the guys at Darr Feedlot. They do a great job year over year developing our bulls and giving us feedback to ensure our customers are happy with their purchases.

The bulls will have passed a semen test and will have all information available on sale day. Please don't hesitate to call with any questions and know we will do our best to assist you in any way we possibly can. Thanks for your interest.

Hans Burken

FREE CARE

All bulls will be cared for and wintered free of charge until March 30. Bulls picked up within 3 days of the sale will have \$50 deducted from the price.

LIABILITY

All precautions will be taken to protect the safety of everyone attending the sale. However all persons attending the sale do so at their own risk. Neither 4M Angus nor any of the sale staff assume any responsibility or liability, legal, or otherwise for any accidents occurring on or about the premises.

GUARANTEE

Buyers of all bulls selling for \$3000 or more are guaranteed against breeding injury for the first season. Breeding season is defined as the 90-day period following the turnout of the bulls. If a replacement bull is available, one will be provided or if the buyer prefers, credit towards one bull will be given in the following year's sale, less salvage value of the injured bull or \$1250, whichever is higher. This is not a life insurance policy. It does not include loss due to neglect, sickness, or an act of God (lightning, flood, etc). If any problems or issues arise, please contact us within 48 hours.

TERMS & CONDITIONS

All cattle sell under a 100% satisfaction guarantee from 4M Angus and under the terms and conditions of the American Angus Association.

HERD HEALTH

The bulls are on a complete health program. They have had pre-weaning and weaning shots and have been vaccinated with IBR, BVD Type I and II, P13, Pasturella, 7-way, Haemophilus, and Decotmax injectable. All bulls have been scrotal measured and have passed a semen test done by Dr. Jeremy VanBoening of Republican Valley Animal Center at Alma, NE.

FREE DELIVERY

Free delivery will be done on all bulls up to 150 miles. After the 150 miles you may be asked to meet at a central location or arrange for delivery of your bull.

VOLUME DISCOUNT	2 Bulls.....	1%
	3-4 Bulls.....	2%
	5 or more.....	3%

Please bring your catalog with you on sale day!

American Angus Association \$Value Indexes

Dollar value indexes, or **\$Values**, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase weaning and maternal milk traits while also continuing to increase mature cow size.

Feedlot Value (\$F), an index expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires. The underlying objective assumes commercial producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis with no considerations of premiums or discounts for quality and yield grade.

Grid Value (\$G), an index expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.

ANGUS A powerfully built, tremendously structured son of Sitz Barricade to lead off this years sale. Maybe one of the best all around bulls we have ever offered, this bull is the #1 \$M son of Barricade in the entire breed. Extremely soft made with a ton of muscle shape and dimension all the way down is rear quarter. Big time herd bull prospect with a 41cm scrotal. Ratioed 111 at weaning and 106 at a year. Retaining 1/3 semen interest.

Barricade is unmatched in his depth of body, muscle shape and power combined with outstanding growth figures. One of the most exciting parts is his maternal performance. He ranks among the best in the breed for maternal traits. Look for him to sire those easy-fleshing daughters that breed up quickly and last for many years in your herd.

4M Ace 709 is the all-time top selling bull at 4M Angus going to ABS in our 2018 sale for \$53,000. Our Ace calves have been low birth weight calves with tremendous growth and power. He has been used for the last two years on heifers and have produced the heaviest calves coming off our two-year-olds. The daughters calving now may well be the best part of Ace. They are beautifully uddered with a good amount of milk and extremely gentle.

ANGUS Cataloging the bulls this year may have been the toughest ever. This bull may be as good as anything in the offering! He is tremendously long sided with extra look and muscle dimension and should sire some excellent feeder cattle with his carcass profile. Ratioed 104 for YW.

ANGUS Lots 10 and 11 were twins and both raised on the side of their dam, so don't discount them because of their weaning weights. Both are extremely docile, high performing type bulls with an excellent set of growth numbers. Know How is a bull we chose to use because of the limited availability and price of his sires semen. They have more than exceeded our expectations!

ANGUS A deep bodied, superior phenotype, excellent footed son of E&B Plus One to lead off this sire group. A bull that has been easy for visitors to find and has been a favorite of many. Will not only sire high performing feeder calves but will leave a pen of replacement females that anyone would want. Ratioed 112 at weaning and 102 for yearling weight.

ANGUS Another Patriarch son of my daughters that descends from the great F703 cow. The Patriarch calves were born easy and unassisted and he has been our go to heifer bull the past 2 years. These sons should sire the same easy born, highly vigorous type calves he has come to be known for. All this with an extra shot of carcass and maternal built in makes for an excellent heifer bull.

ANGUS EPD's available sale day due to young age. The youngest bull, not only in this sale, but any sale we have ever had! This young May born calf is as fancy and well made as any we have produced in the past. His dam was the reserve champion female at the Nebraska State Fair and has went on

to become one of our lead donors for our show string. We always have people looking for a bull for their kids show heifers and this is the best we've ever offered. Excellent feet and legs and tremendous thickness for just a May calf!!

KLM Missie 9410 - Dam of Lot 35 Reserve Champion Angus Heifer at the 2020 Nebraska State Fair FFA Show

BURKEN CATTLE CO

Sim Angus Bulls

American Simmental Association

Expected Progeny Difference (EPD), EPDs are the most accurate and effective tool available for comparing genetic levels. In using EPDs, the difference between two sires' EPDs represents the unit difference expected in the performance of their progeny. For example, if sires A and B have EPDs of +10 and -5, a 15-unit difference would be expected in their progeny (moving from -5 to +10 yields 15 units). Key to using EPDs is knowing what units they are expressed in. For example, if the above case referred to weaning weight EPDs, A would be expected to sire 15-pounds more weaning weight than B. If calving ease were the trait, A would be expected to sire 15-percent more unassisted births in first-calf heifers; in other words, if B sired 30 assists in a group of 100 heifers, we'd expect A to require 15 assists. A percentile-ranking chart is required to determine where a bull's EPDs rank him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org. Listed below are the units ASA EPDs are expressed in:

Calving Ease (CE): Percent of unassisted births when used on heifers.

Birth Weight (BW): Pounds of birth weight.

Weaning Weight (WW): Pounds of weaning weight.

Yearling Weight (YW): Pounds of yearling weight.

Maternal Calving Ease (MCE): Percent of unassisted births in first-calving daughters.

Milk (MLK): Pounds of weaning weight due to milk.

Maternal Weaning Weight (MWW): Pounds of weaning weight due to milk and growth.

Yield Grade (YG): Yield grade score.

Carcass Weight (CW): Pounds of carcass weight.

Marbling (MRB): Marbling score. Back Fat (BF): Inches of backfat.

Ribeye Area (REA): Square inches of ribeye.

All-Purpose Index (API): Dollars per cow exposed under an all-purpose-sire scenario. (See below for more details.)

Terminal Index (TI): Dollars per cow exposed under a terminal-sire scenario (See below for more details.)

\$Indexes: Though EPDs allow for the comparison of genetic levels for many economically important traits, they only provide a piece of the economic puzzle. That's where \$ indexes come in. Through well conceived, rigorous mathematical computation, \$ indexes blend EPDs and economics to estimate an animal's overall impact on your bottom line. The same technology that led to the dramatic progress in swine, poultry and dairy genetics over the last several decades was used to develop the following \$ indexes:

- **All-Purpose Index (API)**: Evaluates sires for use on the entire cow herd (bred to both Angus first-calf heifers and mature cows) with the portion of their daughters required to maintain herd size retained and the remaining heifers and steers put on feed and sold grade and yield.
- **Terminal Index (TI)**: Evaluates sire for use on mature Angus cows with all offspring put on feed and sold grade and yield.

Using API and TI: First, determine which index to use; if you're keeping replacements use API, if not, TI. Then, just as with EPDs, zero in on the unit difference between bulls. (As described above, index units are in dollars per cow exposed.) The difference can be used to determine how much a bull is worth compared to another. Or, put another way, how much you can pay for one bull compared to another. For example, when buying an all-purpose type sire, you can quickly figure a bull scoring +100 for API is worth an extra \$6,000 over a +50 bull if both are exposed to 30 cows over 4 years ($\$50 \text{ diff.} \times 30 \text{ hd.} \times 4 \text{ yr.} = \$6,000$). A percentile-ranking chart is required to determine where a bull's index value ranks him relative to other bulls in the breed. For percentile rankings or more detailed information about EPDs and \$ indexes visit www.simmental.org.

HOMOZYGOUS BLACK | 5/8 SM 3/8 AN. Very complete bull to start the SimAngus offering. Dam C515 is our main donor cow highlighting several previous bull sales with many wet daughters now in production to prove her worth. High seller in last year's sale sold to Trauernicht Simmentals. Extremely sound and athletic, yet powerful and wide based. Very practical, balanced EPDs across the board with top 25% API and TI. Sired by a tremendous herd sire from Sunflower Genetics in Kansas who we lost this past summer. Lot 40 traces back to the same cow (15P) as 9 other bulls in the sale.

REFERENCE DAM BC MS C515

PRACTICAL, BALANCED EPDS

HOMOZYGOUS BLACK | 1/2 SM 1/2 AN.

Lots 55-57 are flush brothers from our Predestined 701T donor.

They are all very similar in their type, neat headed, long sided, thick made bulls. All have top 30% growth EPDs along with top 25% API and TI. High growth bulls, but the females may be better. If you keep or sell replacement heifers, these bulls need to be considered. They will be quiet, moderate, phenomenal uddered cows.
